**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

## Multimapping Design of Complex Sensor Data in Environmental Observatories

*H.Hajj-Hassan, N.Arnaud, A.Castelltort,  
L.Drapeau, A.Laurent,  
O.Lobry, C.Khater*

# WIMS'16

6<sup>th</sup> international conference on  
Web-Intelligence, Mining and Semantics

Nîmes, France – June 13-15, 2016

National Council for Scientific Research

# Environmental resources

- air quality, water quantity, birds,...
- need for data to understand fundamental questions such as **global change**
- collecting data: sensors + human as a sensor (HaaS)
- need for data sharing, data publishing
- data models and formats have emerged
- need for data crossing

# O-Life

- The **Mediterranean basin** is a priority area and a leading area for the **analysis of environmental data**
- **shared observatory** between France and Lebanon
- with the aim of **collecting, perpetuating, sharing, and valorizing environmental information**
- creation of an ambitious **Circum-Mediterranean observatory network**

## Objectives of O-Life

- Conduct simultaneously: Observation, Research, Training and Valorization
- Federate skills through common tools and objects
- **Organize, share, sustain and enhance environmental data**

# Priorities

- **Build environmental databases** of the critical zone in consideration
- Conduct **monitoring services**: Provide instruments, equipment, assist in the operation and monitoring of sites
- **Enhance environmental data** and research among scientists, public policy makers, and the public in general, to promote a coordinated approach to sustainable development
- **Facilitate the prospective approach and exchange through innovative web services**
- Be a force of exploration and proposal for relevant calls for projects

# Building environmental databases

- crossing heterogeneous data
  - formats
  - context
- collected for a primary goals and not for publication

# Sensor Data

- Observations and Measurements (O&M) framework
- SOS: Sensor Observation Service
- proposed by the OGC (Open Geospatial Consortium) within the Sensor Web Enablement (SWE)
- Several frameworks, our choice: 52°North

# Concepts

- Feature of interest
- Phenomenon time.
- Result time
- Procedure
- Observed property
- Result
- Unit of Measure

# The need for crossing points of view

- one observation model is meant as to correspond to one feature of interest
- however, it may be the case that several points of view can be considered
- Example
  - following species

Species	Observers	Date of observation (dd/mm/yyyy)	Common name English		Phenology at time of observation	Nb_of_individuals	Sex	Description
				Village				
<i>Dama</i>	A.A.	1/1/2015	Fallow deer	Faraya	Adulte	4	M & F	Gray
<i>Panthera pardus tulliana</i>	C.K.	4/3/2015	Anatolian leopard	Ehden	Young	1	F	Hairy
<i>Dama</i>	S.C.	5/12/2015	Fallow deer	Bsharre	Young	3	M	Long Tail

# Multi-mappings

- with the goal to consider alternative features of interest
- some parts of the SSN ontology are refined in order to be able
  - to represent multiple mappings and
  - to point out the existence of multimapping to the users

# Example: Mapping 1

A	B	C	D	E	F	G	H	I
Species	Observers	Date of observation (dd/mm/yyyy)	Common name English	Village	Phenology at time of observation	Nb_of_individuals	Sex	Description
<i>Dama</i>	A.A.	1/1/2015	Fallow deer	Faraya	Adulte	4	M & F	Gray
<i>Panthera pardus tulliana</i>	C.K.	4/3/2015	Anatolian leopard	Ehden	Young	1	F	Hairy
<i>Dama</i>	S.C.	5/12/2015	Fallow deer	Bsharre	Young	3	M	Long Tail
Mapping_1								
<i>ObservedProperty</i>	Procedure	samplingTime	phenomenon_description	<i>featureOfInterest</i>	propertyValueProvider	propertyValueProvider	propertyValueProvider	propertyValueProvider

# Example: Mapping 2

Species	Observers	Date of observation (dd/mm/yyyy)	Common name English		Phenology at time of observation	Nb_of_individuals	Sex	Description
				Village				
<i>Dama</i>	A.A.	1/1/2015	Fallow deer	Faraya	Adulte	4	M & F	Gray
<i>Panthera pardus tulliana</i>	C.K.	4/3/2015	Anatolian leopard	Ehden	Young	1	F	Hairy
<i>Dama</i>	S.C.	5/12/2015	Fallow deer	Bsharre	Young	3	M	Long Tail
<b>Mapping_2</b>								
<i>featureOfInterest</i>	Procedure	samplingTime	phenomenon_description	propertyValueProvider	propertyValueProvider	<i>ObservedProperty</i>	propertyValueProvider	propertyValueProvider

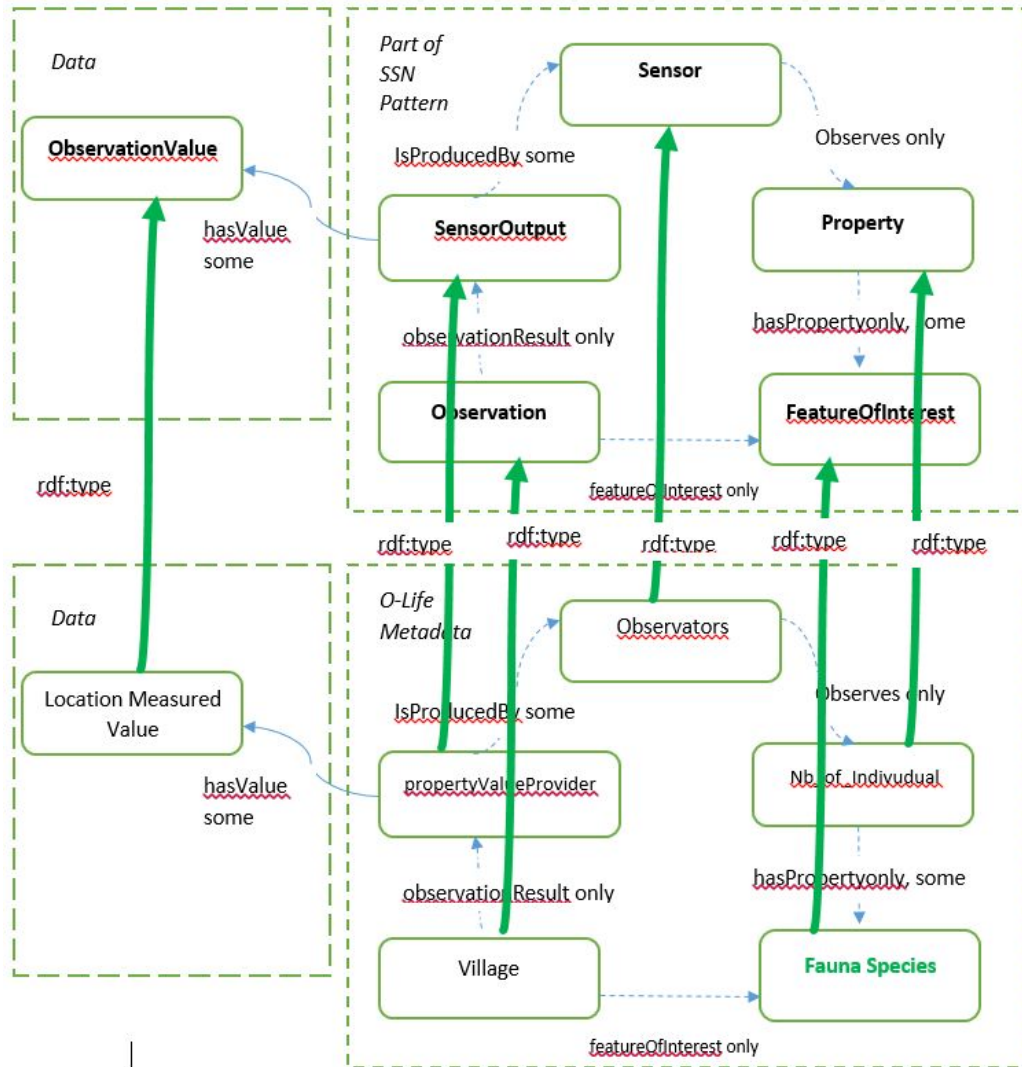

# Representing multiple mappings

- introduction of ssn:alternative
- alternative observation
- alternative feature of interest
- alternative observed property

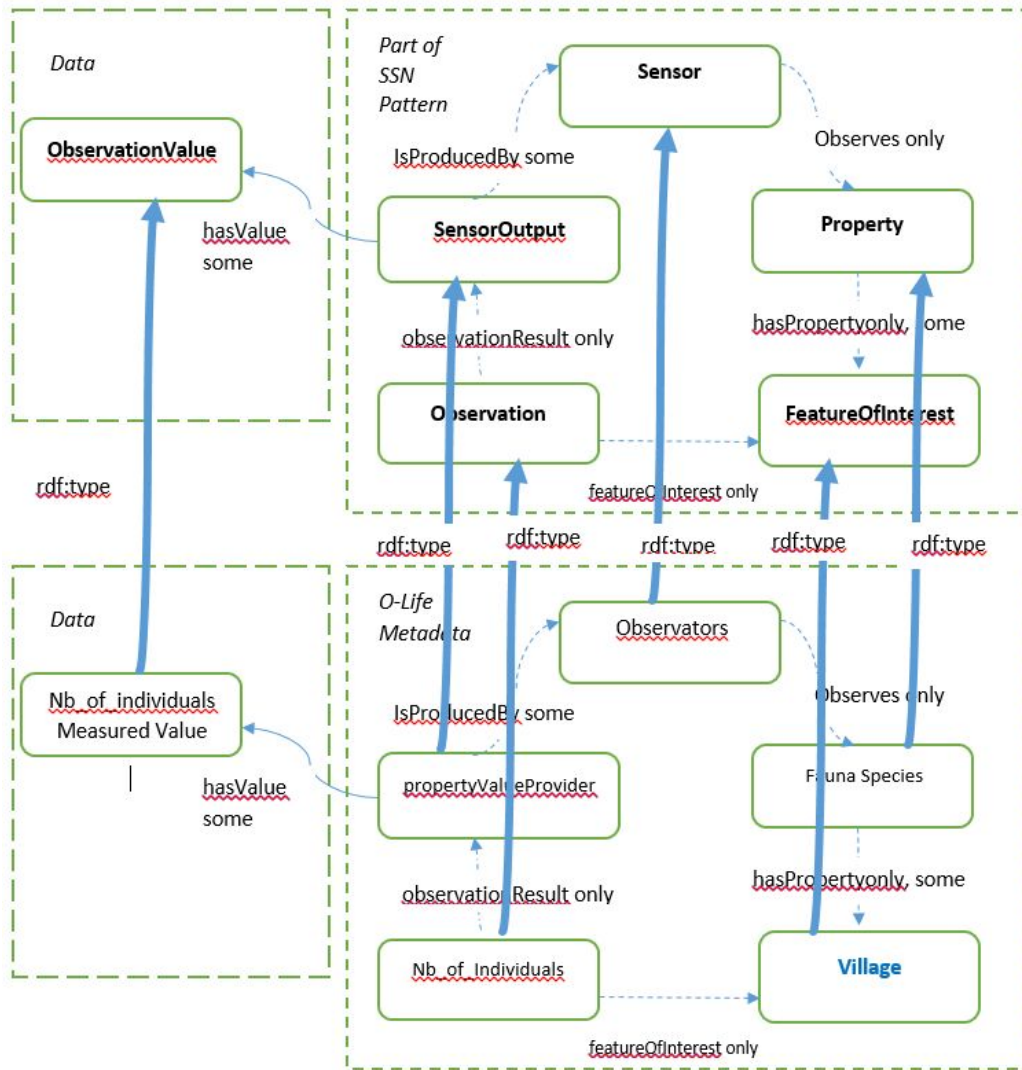

Description	Proposed Property
Alternative Observation	mssn:AltObservationDesign
Alternative Feature of Interest	mssn:altFeatureOfInterest
Alternative Observed Property	mssn:altObservedProperty
Alternative Observed By	mssn:altObservedBy

- introduction of RDF triplets like:

**fauna:species mssn:altFeatureOfInterest ssn:FeatureOfInterest**

# Conclusion and Perspectives

- importance of data crossing in the context of environmental data and climate change
- extension of the SSN ontology in order to make it possible to represent multiple mappings
  
- Need to offer a methodology
- Need to address other examples and frameworks
