HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
Non-Pharmacological Interventions (NPIs) are non-invasive methods of care (programs, products or services) whose efficacy in improving the health and quality of life of human beings has been proven. Their effects on health and quality of life markers are observable (with measured risks and benefits beyond mere user opinions) and can be linked to identified biological and/or psychological processes. They can also have a positive impact on health behaviours and socio-economic indicators. (CEPS Platform, April 2016).

Defining a shared ontology of NPIs is a wildly used way to represent complex information and interrelationships. We use URI to share and link to other resources available on the Web of Data.

Criteria for selecting tools:
- Free
- Collaborative
- Available in English
- Web-based
- Graphical User Interface
- Versioning
- Audit Trail

Selected tools:
- WebProtégé
- BioPortal

Building an ontology:
- is an iterative process
- is a complex task
- requires a considerable amount of human effort.

The collaborative ontology for NPIs is being built.
- WebProtégé and BioPortal make the ontology development easier and more effective.
- NPIs data is shared and linked in human-readable and machine-interpretable forms.
- The ontology allows to improve data retrieval and data crossing for better understanding NPIs and better defining advanced digital tools.
