**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# A Hardware-aware Heuristic for the Qubit Mapping Problem in the NISQ Era

## Introduction

- NISQ devices.
- Connectivity constraint: Nearest-neighbor connections.
- Different physical qubits: various calibration data.
- Qubit mapping problem: Adapting a quantum program to given hardware connectivity.

## Motivation

- Initial mapping
  - $\{q_0 \rightarrow Q_0, q_1 \rightarrow Q_1, q_2 \rightarrow Q_2, q_3 \rightarrow Q_3, q_4 \rightarrow Q_4\}$
- SWAP candidates:
  - $\{q_1, q_2\}$  and  $\{q_1, q_3\}$
- Choose  $\{q_1, q_2\}$  because of the lower error rate.
- Final mapping
  - $\{q_0 \rightarrow Q_0, q_1 \rightarrow Q_2, q_2 \rightarrow Q_1, q_3 \rightarrow Q_3, q_4 \rightarrow Q_4\}$

## Methods

- Hardware-Aware (HA) mapping transition algorithm.

- Cost function

$$H = \frac{1}{|F|} \sum_{g \in F} D[\pi(g, q_1)][\pi(g, q_2)] + W \times \frac{1}{|E|} \sum_{g \in E} D[\pi(g, q_1)][\pi(g, q_2)]$$

- Distance matrix

$$D = \alpha_1 \times S + \alpha_2 \times \varepsilon + \alpha_3 \times T$$

- $S$ : SWAP matrix,  $\varepsilon$ : SWAP error matrix,  $T$ : SWAP execution time matrix

- Selection between SWAP and Bridge gate.

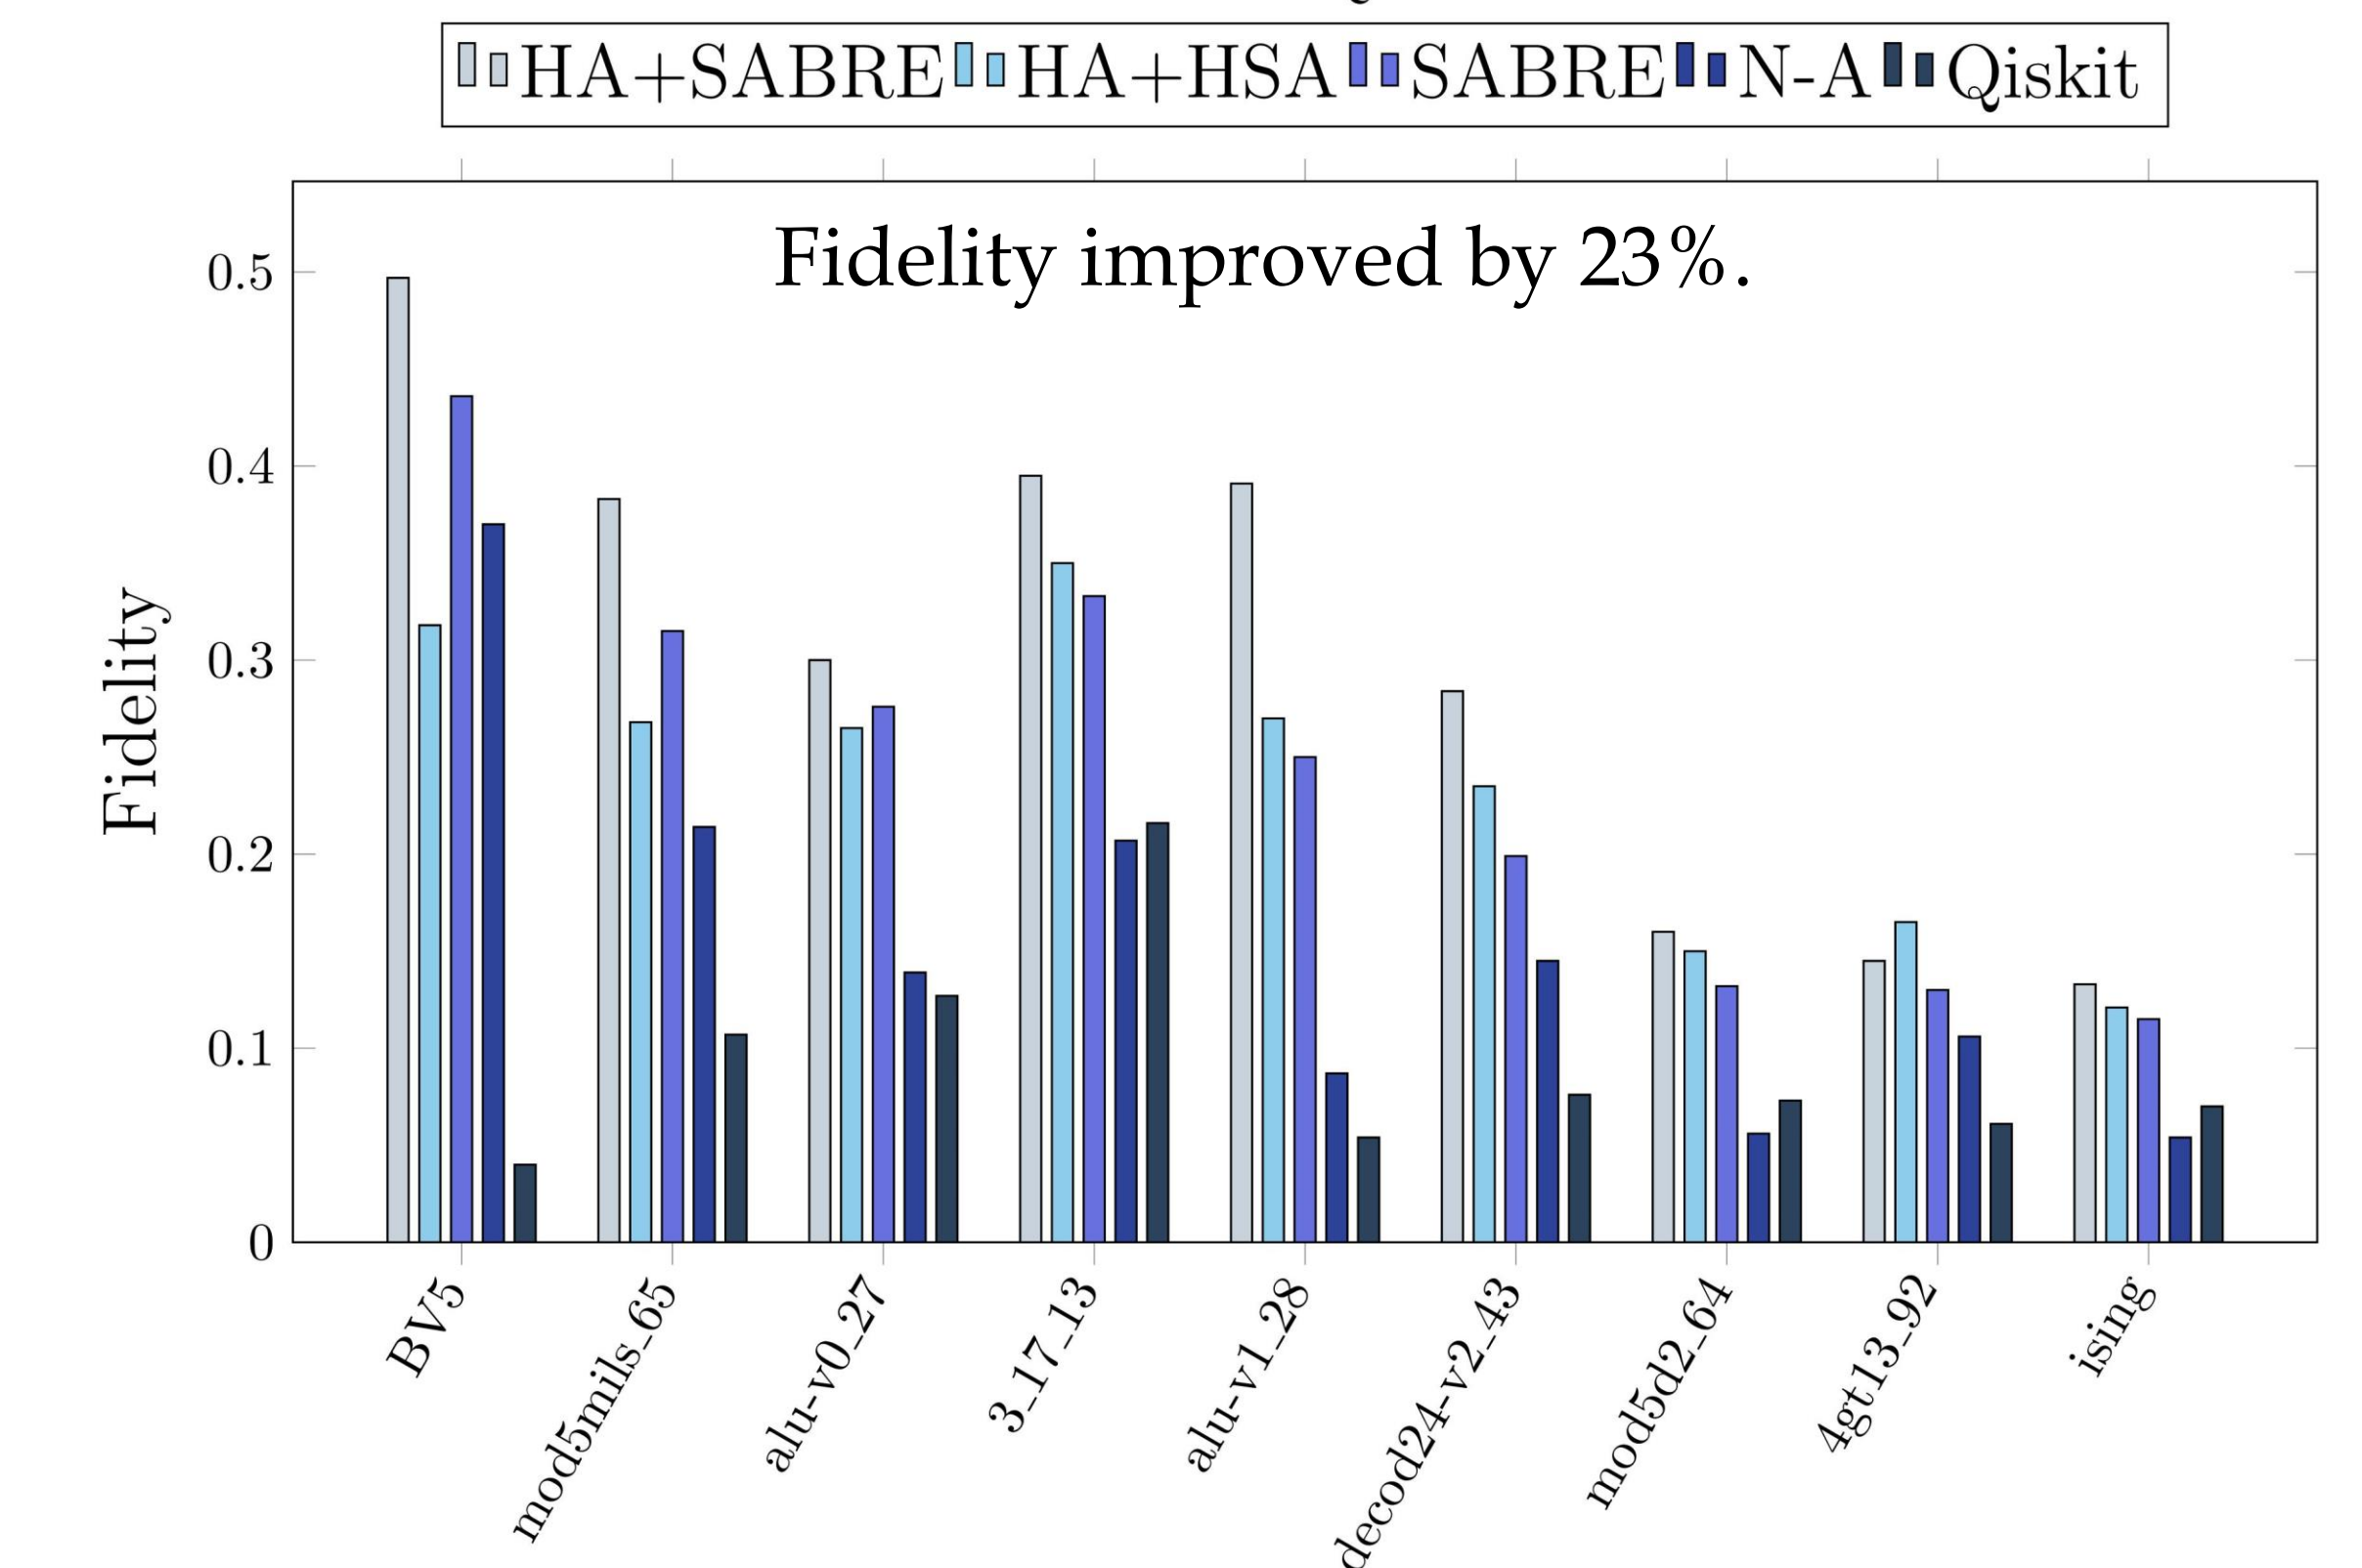

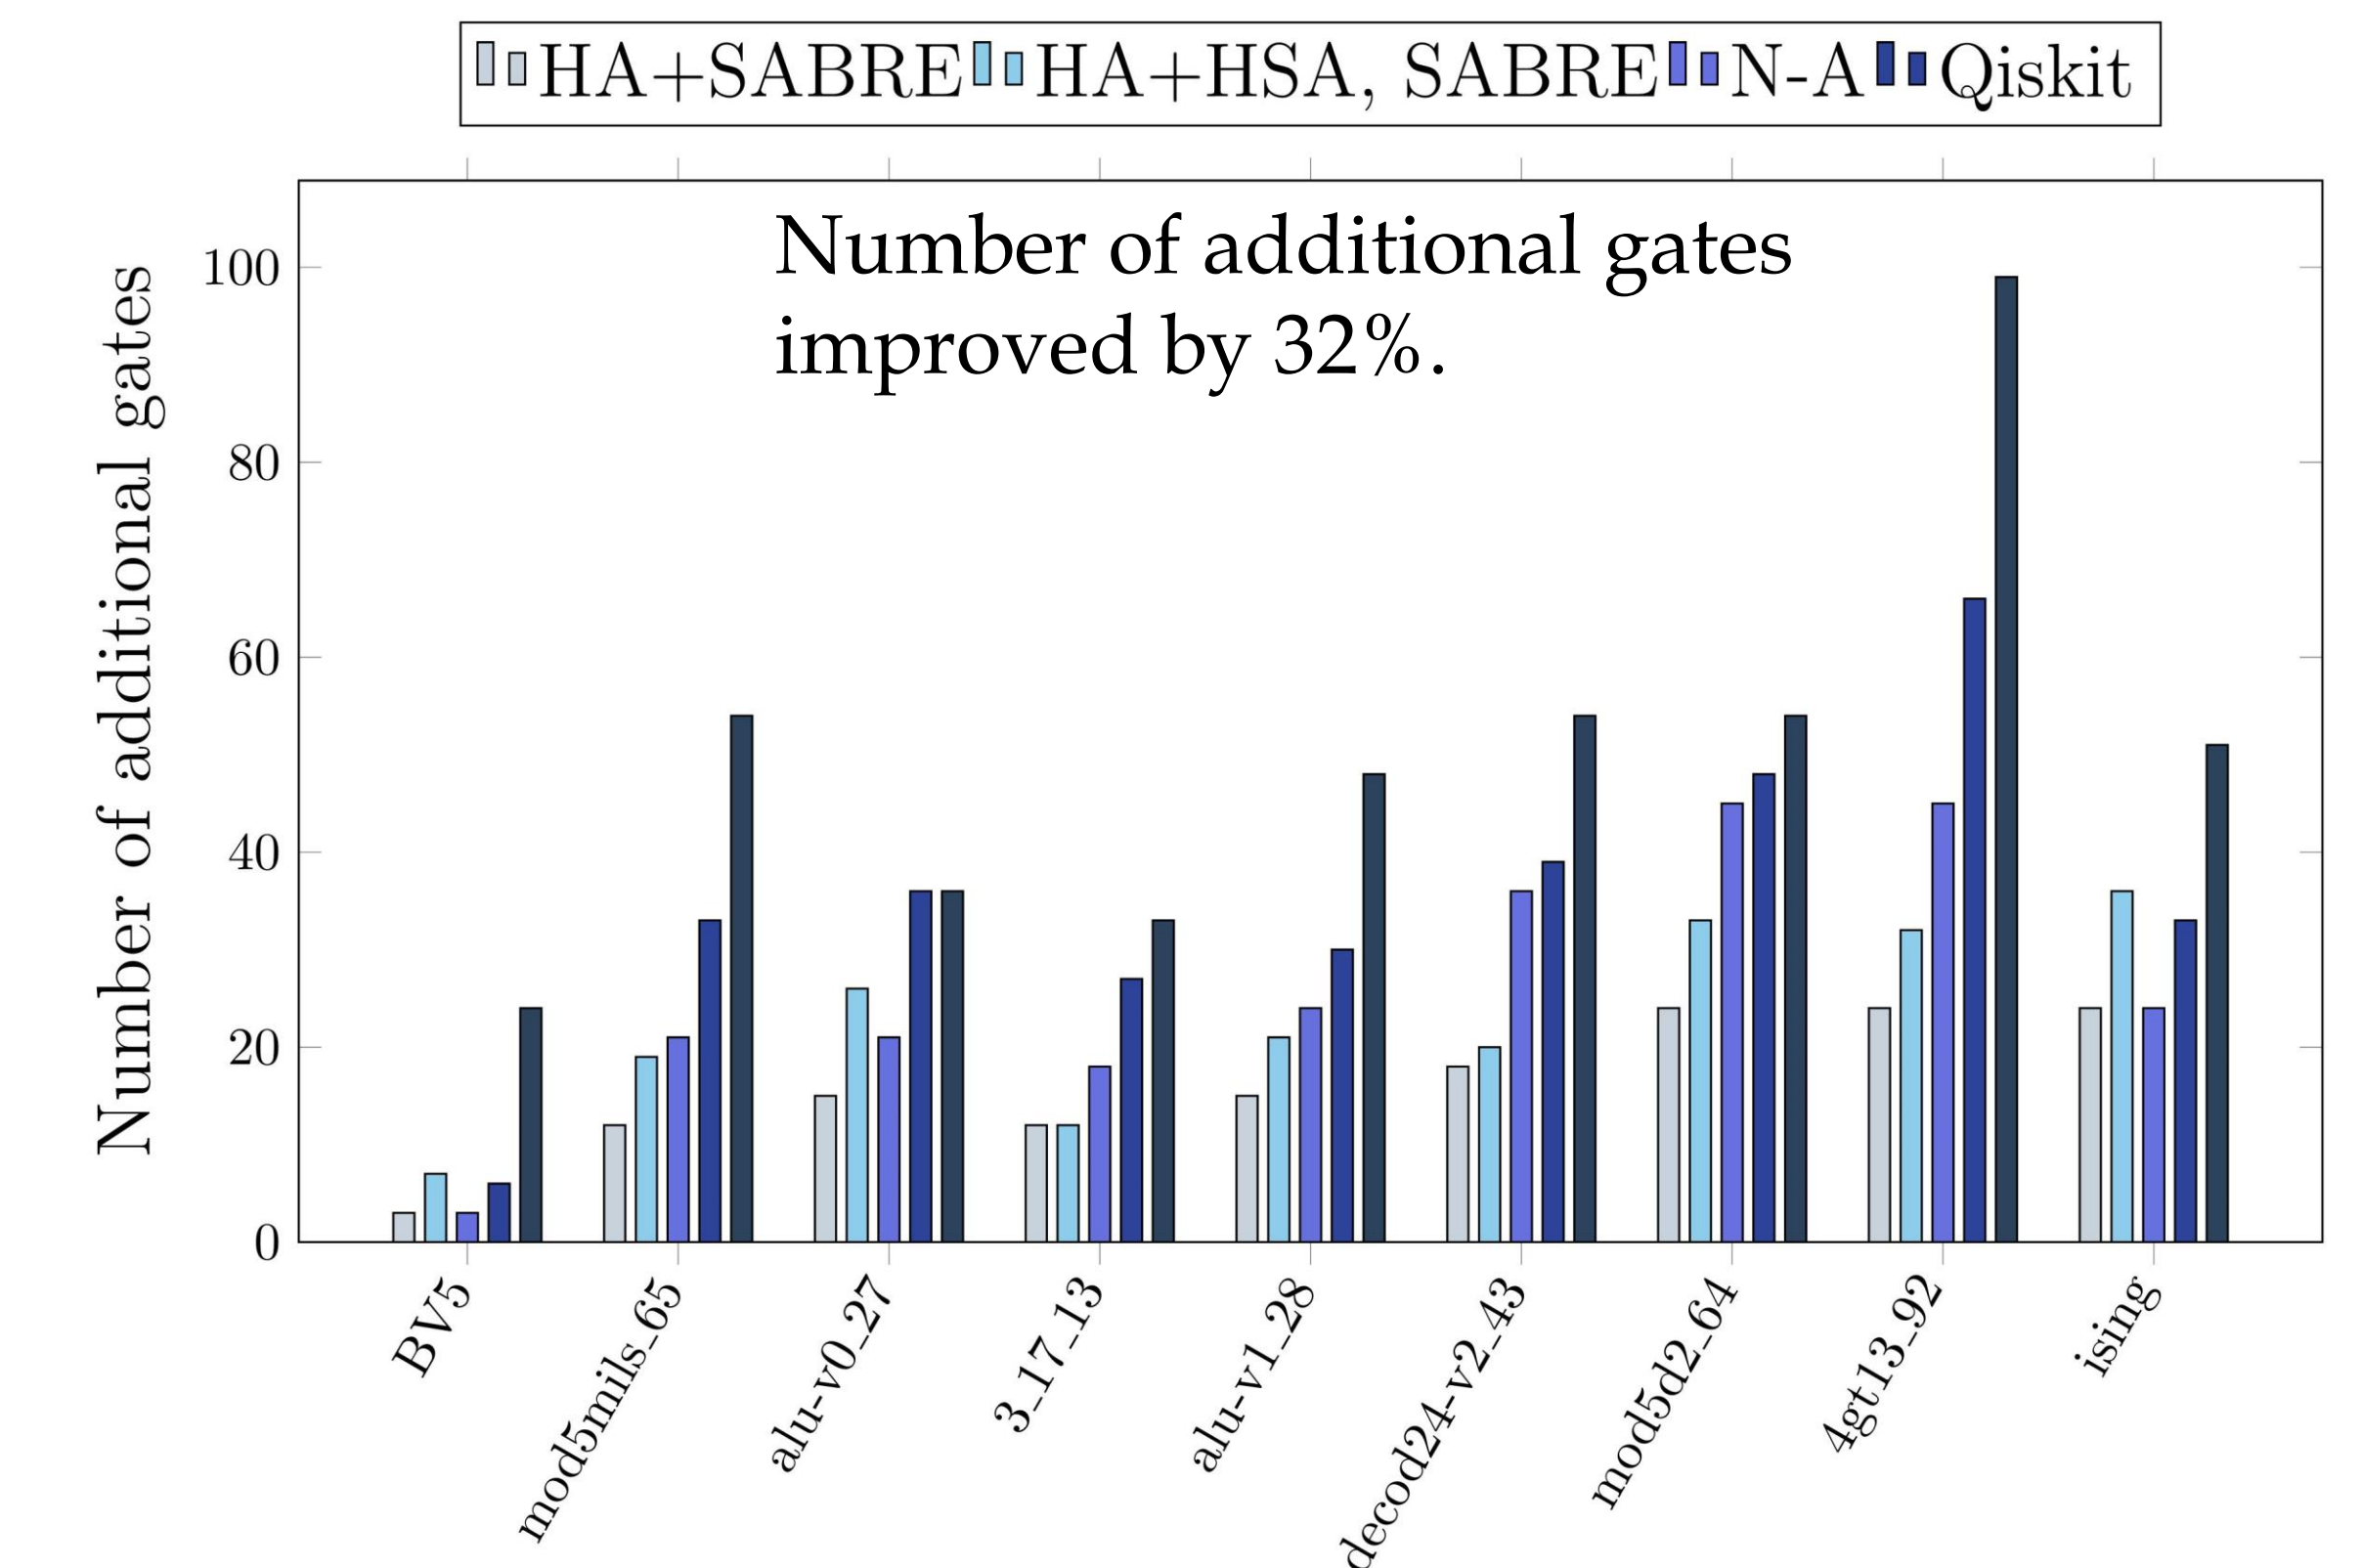

- Hardware-aware Simulated Annealing (HSA) initial mapping.
- Hardware-aware `get_neighbor` method.

## Results

- Comparison of number of additional gates on IBM Q 20 Almaden (large benchmarks).

- Comparison of number of additional gates and fidelity on IBM Q 20 Almaden (small benchmarks).

## Conclusion

- Map the most used qubit of the mapped circuit to the most connected physical qubit.
- Apply CNOT gates on qubits that are directly connected and with reliable interconnects.
- If a CNOT cannot be applied on two neighbor qubits, apply on two qubits whose distance is two.
